## **MIFAB – MI-GARD – Floor Drain Trap Seal Protection Device – Installation and Maintenance Instructions**

Installation Instructions: The MI-GARD-2 (2”), MI-GARD-3 (3”) and MI-GARD-4 (4”) Floor Drain Trap Seal Devices install into either the outlet connections of floor drain bodies or into the inside of floor drain strainers.

To install into the outlet connections of floor drain bodies, remove the grate or strainer and place the appropriate size MI-GARD product (match the opening size 2”, 3” or 4” with the product size) into the inside of the floor drain body outlet connection. The four flexible silicon sealing ribs ensure easy installation into openings that have variations in size.

To install into the inside of floor drain strainers, remove the grate or strainer and place the appropriate size MI-GARD product (match the opening size 2”, 3” or 4” with the product size) into the inside of the throat of the strainer. The four flexible silicon sealing ribs ensure easy installation into openings that have variations in size. The product is not intended to be installed in lieu of a trap primer.

### Maintenance Instructions:

If the silicon flapper becomes worn, remove the MI-GARD device from the floor drain body, strainer or drain pipe by gripping onto the ribs inside of the device and pulling upward. The single silicon flapper can be easily pulled off of the post and replaced with a new silicon flapper from MIFAB or from one of our representatives.

If the four flexible silicon sealing ribs become worn, remove the MI-GARD device from the floor drain body, strainer or drain pipe by gripping onto the ribs inside of the device and pulling upward. The four flexible silicon sealing ribs can be easily pulled off from around the ABS body as one piece and replaced with a new flexible silicon sealing rib part from MIFAB or from one of our representatives.
