Sioux Chief is proud to offer its PowerPEX™ F2080 line of fittings. It is engineered to be premium quality in design, material and manufacturing.

**Leak-Proof Connection.** The F2080 system's unique sleeve and fitting combination creates unparalleled compression, forming a positive seal and a permanent connection.

- No leaks means no wasted labor, helping you to pay for labor once and stay on budget.
- No leaks means no claims and damage bills, helping you to protect profits from claim risks.
- The unique F2080 connection creates a “can’t miss” connection that can be visually inspected, unlike crimp or other cold expansion system connections that can be misaligned, misassembled or not crimped at all.
- The unique F2080 PEX fittings are designed with more sealing surface and more sealing barbs than all other common PEX systems; more seal is a better seal.

In addition to leak-proof connections, Sioux Chief's PowerPEX F2080 line of fittings offers a full spectrum of capabilities.

**Cold Weather Capable.** PowerPEX F2080 fittings install easily in cold weather and can be tested immediately.

**Commercially Appropriate.** The large diameters and stout design of these PEX fittings make them a viable copper alternative even for industrial and commercial applications.

**Superior Water Flow.** PowerPEX F2080 fittings and pipe combine to enjoy superior hydraulic properties, making a waterway that is 10% larger than other PEX systems.

**Comprehensive Supply.** From directionals to stub outs to manifolds, Sioux Chief supplies a wide range of listed and certified fittings to meet your needs and save you money.

**Made in the USA.** Fittings, sleeves and engineered components are domestically manufactured from domestic material.

**Premium Warranty.** Sioux Chief's world class, 25 year limited lifetime warranty is rare. It not only covers all products in its F2080 fitting system, it covers them if they are used in combination with other companies' pipe or fittings. Please visit [siouxchief.com](http://siouxchief.com) for more information.

Sioux Chief is proud to offer its PowerPEX F2080 fitting system. We believe in it. It is a solid investment that will return for you with quality and service.

# The Idea of Fitting Freedom

» PEX, Plumbers and the Power to Choose

When plumbing contractors choose to bid or install PEX piping systems, they often choose a PEX fitting system as well. This choice is important. It speaks to the contractor's appreciation of, and insistence on, quality and capability. Few other business decisions in the plumbing trade say as much about a contractor. PEX fitting systems help to define a contractor's brand. They often become one with the contractor's brand.

To help contractors maximize their potential as tradesmen and to define their brand of rough plumbing...

## Sioux Chief has started a PEX REVOLUTION.

### PowerPEX Multiple PEX Systems

As the only manufacturer offering all three major PEX fitting systems – F1807 (and F2159), F1960 and F2080, Sioux Chief gives the contractor the power to choose and puts him or her back at the center of PEX plumbing. This level of choice turns PEX on its head. We have given this rough plumbing revolution a name: **PowerPEX**.

When choosing a partner for your PEX installations, consider Sioux Chief's line of PowerPEX fitting systems. Sioux Chief brings you the quality parts and fitting systems that you deserve, and does so at the right price, with the right warranty and with a commitment to American manufacturing. With Sioux Chief, you have the power to choose your brand of quality PEX plumbing.

### PowerPEX Dual & Hybrid PEX Systems

Historically, contractors who bid and installed PEX systems chose a single PEX fitting system. This made sense. They had one set of tools to manage and one type of fitting connection to learn. Today, a growing number of plumbing contractors are investing in two or more systems to expand their capabilities. Sioux Chief's PowerPEX fitting systems provide them with that opportunity.

**Bidding More.** Contractors who submit more bids have more chances to win bids. By adding capabilities to your company, you can be a contractor who bids more. With Sioux Chief's revolutionary PowerPEX fitting systems, you can bid just about any plumbing job.

**Winning Bids.** To win bids, it helps to have an angle. The ability to bid a single job in two or more ways is a good angle. For example, you could bid a single job twice, with different PowerPEX systems. Or you could bid a single job with a combination of PowerPEX fitting systems. Either way, you can offer your future customer options with confidence, and find your recipe for success.

**Saving Money.** By combining the distinctive features of separate PowerPEX systems, you can cut costs and improve quality. Certain PEX fitting systems might be the right fit for branch runs on an apartment complex; another fitting system might be smarter for the trunks or the mechanical room in a commercial building. Hybrid systems can help you save money while enhancing your quality and brand.

**TAKE THE FIELD.**
