About Us...

Founded in 1945 in the Bronx, NY by two naval engineers, Sealed Unit Parts Co., Inc (SUPCO) originated as a service company for refrigeration systems. These systems were “sealed”, so that, when service was needed, the repair was done invasively. The desire to overcome this method was the impetus for the development of the patented “Bullet” valve in the 1950’s.

As demand for the “Bullet” valve grew, Supco’s burgeoning manufacturing operation moved to Monmouth County, NJ. SUPCO set its roots deep in Monmouth County, NJ during the decade of the 1960’s. Another important development during that decade was a patent for utilizing “PTC” components as switches for control devices.

During the 1970’s, the utilization of PTC devices as switches led to the development of “The Original” two wire refrigeration and air conditioning hard starts. “Super Boosts” and “3 N 1” hard starts revolutionized the aftermarket’s method for installing hard starts on air conditioning and refrigeration systems.

The 1980’s brought with it an expansion into the test instrument market, with the addition of simple testing devices for critical parameters in refrigeration and cooling systems. The MFD10 capacitor tester and M500 compressor insulation tester laid the foundation for development of test instruments designed to make service professional’s tasks simple, with reliable results.

SUPCO developed the first electronic vacuum gauge in 1990. The VG60 removed the uncertainty of analog technology for the growing need to measure this key system characteristic. During the latter part of the decade, master distributor partnerships for product lines, such as Therm-o-Disc components, bolstered SUPCO’s position as a key supplier to HVAC and Appliance wholesale distributors.

As we entered a new millennium, continued strategic growth resulted in a need to expand existing facilities in NJ, and later, the establishment of manufacturing facilities abroad. Additional product development in hard starts and vacuum gauges was the catalyst for that growth. In 2007, SUPCO acquired Climate Technology Corporation (CTC), adding thermostats to a broadening product line.

Another decade brings continued product line expansion through in-house development, master distributor relationships and acquisition. This strengthens Supco’s position as a leader in the HVAC, Refrigeration and Appliance industries. Proof of that is the acquisition of A-1 Components and Camstat in September of 2013.

Multiply the recommended length by the conversion factor. 4.) As a general rule you should use a capillary tube that is between 5 feet and 16 feet long EXAMPLE: The recommended capillary tube is .046 X 120" Find 0.046 in the left column read across to 0.595 [BC42] or 0.783 [BC44] or 1.410 [BC49]. Multiply 0.595 X 120" = 71.4" Good Choice Multiply 0.783 X 120" = 93.96" Best Choice Multiply 1.410 X 120" = 169.2" Okay choice, too long for service pack.

Will R3-AC LEAK REPAIR fix my leak?

In general, R3 is designed to seal an AC system that has slow leaks and loses refrigerant over time. Maximum leak size approximately 0.50 mm. The system must be able to hold a vacuum on the low side for 15 minutes, at a minimum. If the vacuum leaks out or changes, the hole is too large to be sealed and mechanical repairs may be needed.

R3-AC Leak Repair® Extends system life and quiets a noisy compressor. It improves system lubrication up to 1200% and reduces energy consumption. It also improves the efficiency of older AC systems.

Formulated with surfactants contained in the US E.P.A.'s DfE (Design for the Environment) CleanGredients database. The vapors of the Australian Tea Tree Oil are not harmful to humans or pets and the essential oil is classified as non-hazardous. All claims regarding antimicrobial and disinfectant properties are presented for information use only. This year we launched our brand new website at www.supco.com. This new site has a full search feature which allows visitors to search any product we carry by part number, product category or name. For each part you will find a detailed description, photo, specifications, applications, cross reference list, accessories and have the ability to download any printed materials pertaining to that specific part. In addition to products, visitors will also have the ability to search for distributors and sales reps near them, track their order, read current press releases, download our product catalogs and get updated on upcoming tradeshow and events. For any questions please feel free to contact us and we will be happy to assist you.
